**PlayPro™ impact protection ring/lip made of natural rubber**

- ✓ Smooth transition between trampoline and EPDM wet pour surface or artificial turf
- ✓ Optimal and durable fall protection to the trampoline inner edge (shock-absorbing)

# EUROTRAMP®

## PLAYPRO™ RUBBER PROTECTION RING/LIP

**Robust and durable:** PlayPro™ is especially suitable for heavily used trampolines.

The PlayPro™ connection/end lip made of non-slip natural rubber serves as edge protection and creates a smooth transition between the trampoline and the surrounding ground covering, e.g. to EPDM wet pour surface or artificial turf.

PlayPro™ is glued to the trampoline frame before the surrounding ground covering is applied.

Precise attachment without any tools:  
The individual parts of the PlayPro™ ring are inserted into each other.

PlayPro™ was developed by Rampline in cooperation with Eurotramp and meets the requirements of DIN EN 1176.

Eurotramp Kids Tramps – awarded several times:

besonders entwicklungsfördernd

Ein Qualitätssiegel der Bundesarbeitsgemeinschaft für  
Haltungs- und Bewegungsförderung e.V.

Suitable for playgrounds  
according to DIN EN 1176
